

WATERBOY™ Dual

Water Softener and Conditioner

This carbon resin softener is the next stage in water conditioning.

Why the Dual?

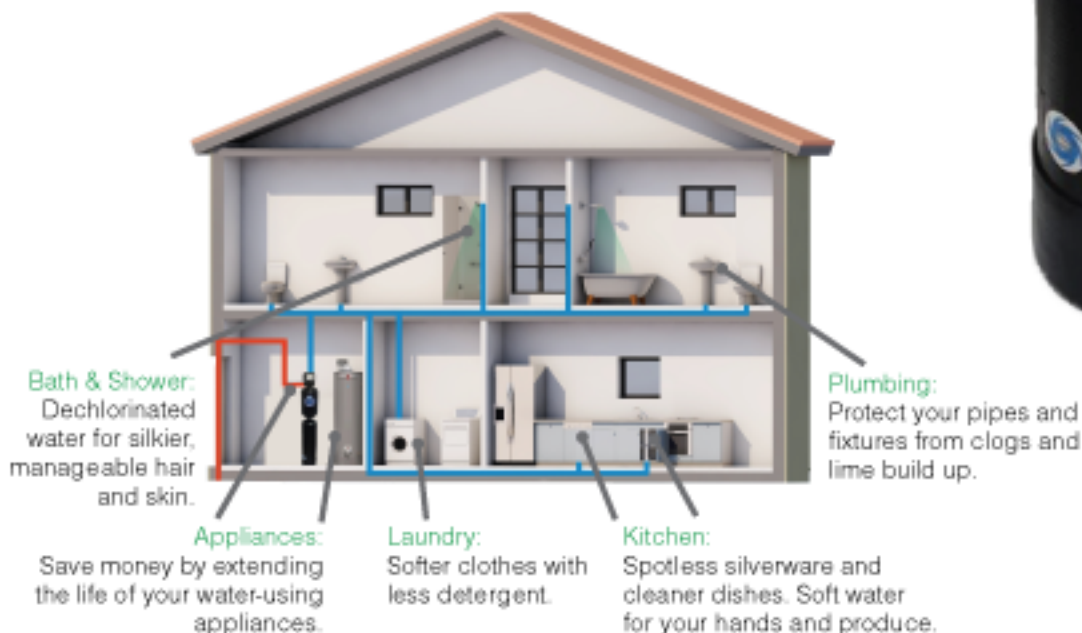

1. Not only is hardness removed from your source water, but more importantly, chlorine is.
2. Chlorine is another chemical that is corrosive in your water and will break down your resin media with time. Our first tank will remove chlorine before it filters through your softener media.
3. Vortex distribution technology creates a funnel effect during regeneration. This is a superior, more efficient backwash on both carbon and resin media.
4. The metering ability provides efficient water use with limited salt consumption.

Features:

Dual carbon and resin filtration
Down flow system
Vortex backwash technology
10" media filtration

Demand driven
20,000 grain exchange capacity
1 cubic ft. of high efficiency resin
3/4 cubic ft. of carbon media

See the Dual Difference in your home.
